Golgi localization
Golgi organization
Gtpase activator activity
Histone binding
Maintenance of organelle location
Methylation−dependent protein binding
Microtubule−based movement
Microtubule−based transport
Regulation of endocytosis
Sex determination
Transport along microtubule
3'−phosphoadenosine 5'−phosphosulfate metabolic process
Catenin complex
Cell−cell adhesion via plasma−membrane adhesion molecules
Gaba−ergic synapse
Intrinsic component of synaptic membrane
Neuron projection guidance
Presynapse assembly
Regulation of synapse organization
Sulfation
Blastocyst growth
Blood vessel remodeling
Cerebellar granule cell precursor proliferation
Extracellular matrix
Insulin−like growth factor receptor binding
Interstitial matrix
Myotube cell development
Physiological cardiac muscle hypertrophy
Positive regulation of glucose transmembrane transport
Platelet alpha granule
Positive regulation of steroid biosynthetic process
Regulation of myelination
Axon terminus
Dna−binding transcription activator activity
Extracellular matrix
Integral component of presynaptic membrane
Muscle tissue development
Rhythmic process
Rna polymerase ii transcription regulator complex
Skeletal muscle tissue development
Calcium−dependent cell−cell adhesion via plasma membrane
Cell adhesion molecule complex
Contractile fiber
Focal adhesion
Glial cell proliferation
Interleukin−6−mediated signaling pathway
Membrane microdomain
Mononuclear cell differentiation
Myeloid cell homeostasis
Positive regulation of tyrosine phosphorylation of stat
Sperm fibrous sheath
Sperm plasma membrane
